

## “Indian Medicinal Plants an overview”

Sunita Joshi<sup>1</sup> and Durga Nath Dhar<sup>2</sup>

*The favourable climate of India endows her with a rich and varied flora from the very beginning. Our ancestors were curious to recognise the curative effects of the tropical medicinal plants. The herbal drugs are readily available, cheap and virtually free from undesirable side effects. The factors such as soil, rainfall, method of cultivation, time of the collection of the harvest, drying, storage etc. play a vital role in the production of crude drugs and for their quality.*
