

SHORT RESEARCH COMMUNICATION

Vegetative Propagation of Avartani
(*Helicteres isora* Linn.)

M. B. Yelne and P. C. Sharma

Received on 10th April, 1987

*Efforts were made to study the comparative usefulness of the three usual methods of vegetative propagation viz., cutting layering and air-layering, in Avartani (*Helicteres isora* Linn.) at Pune. Out of these air-layering was found to be successful to the extent of 90 per cent. The present communication deals with the details of the trial.*
