

Analytical Study of *Ajmoda Arka*

Subrata¹ and K.K. Dave²

Received on 21st May, 1991

The comparative physico-chemical parameters and thin layer chromatographic patterns of three different Arka samples, prepared by using the fruits of Trachyspermum roxburghianum, Trachyspermum ammi and Apium graveolens have been reported. The data presented show that it is possible to distinguish the arka samples from one another.
