

## Resource Survey of Plants of Potential Economic Value of Sikkim Himalayas

T. N. Srivastava<sup>1</sup> and B. K. Kapahi<sup>2</sup>

Received on 13th June, 1990

*Sikkim Himalayas were exploited intensively. About 400 plant species of medicinal and aromatic values were found wild/cultivated. Out of them, 120 species which are available in considerable quantities and have good potential as raw material for essential oils, steroids, alkaloids, tannins, pharmaceutical industry and exports have been listed. The details covering botanical names, local names wherever possible, parts used, approximate quantity available and important constituents have also been given.*
