

Some Threatened Medicinal Plants from the North-Eastern Region of India

Rajendra Majumder*

Received on 19th July, 1989

North-Eastern Region of India which constitutes seven states is potentially rich area for exploration of plants used in indigenous system of medicine in general and Ayurveda in particular. It represents 50% of the total flora of India. Such a flora of North-Eastern Region of India is gradually facing danger for its existence, many of which are already in the verge of extinction even without having received a scientific glance.

The author has surveyed the medicinal flora of North-Eastern Region of India and is presenting here the 40 of such threatened medicinal plants in this paper.
