

ETHNO-MEDICO-BOTANICAL ASPECTS OF SOME PLANTS OF ARUNACHAL PRADESH

M.S. Rawat¹, V.K. Singh² & Rama Shankar³

Received on 26.3.1995

Arunachal Pradesh, the largest state in North East India is inhabited by several tribes having total tribal population. During course of exploration in different parts of state authors observed that local people have deep faith in traditional methods of herbal treatment and they are still using some plants in treatment of several human ailments. In which some are not known to any system of medicine and hitherto unrecorded in Ayurvedic and other literature.

Present paper deals with such important plants and their uses with highlighting the needs to be analysed for their efficacy and further pharmacognostic studies for confirmation of the local claims. Thereby, it may prove out to be life saving drugs of future.
