## VEGETATIVE PROPAGATION OF DESMODIUM GANGETICUM (L.) DC. (SHALAPARNI) BY STEM CUTTINGS

U.R. Vishwakarma<sup>1</sup>, M.B. Yelne<sup>2</sup> and P.C.Sharma<sup>3</sup>

(Received on 5.2.2002)

The treatment of stem cuttings with 4000 ppm IAA and 10000 ppm IBA for 15 minutes for vegetative propagation of Desmodium gangeticum (L.) DC. resulted in higher percentage of rooting ie. 100% with more number of roots per cuting, as compared to 30 % in control, and found to be ideal for cultivation.
